

Friday, October 25

8:30AM – 11:30AM

C1011 Global Child Health Course

Pearls for Children’s Surgical and Perioperative Care in Resource-Limited Settings

Pediatric medical, anesthesia, and surgical specialists working abroad or volunteering for short-term missions may find themselves without the knowledge and skills to provide optimal diagnostic and perioperative management. Faculty with experience in these settings will share resources, emphasizing perioperative pitfalls, plain X-ray findings (when CT and MRI are not available), safe anesthesia and sedation, and pain management.
