

Sunday, October 27

8:00AM – 12:00PM

H3021 Section on Obesity Program

Adolescent Bariatric Surgery: Current Status and Future State

Bariatric surgery has become an accepted method for managing adolescents with severe obesity. Understanding the procedures' anatomical and hormonal changes along with pre- and post-op care is vital. In addition, knowledge of the psychological changes and expectations for long-term weight loss, weight sustainment, and co-morbidity resolution will provide the best possible outcomes for adolescents struggling with severe obesity.

- 8:00AM **Welcome**
Moderator: Stephanie Walsh, MD, FAAP
- 8:15AM **Business Meeting and Networking**
Chair: Christopher Bolling, MD, FAAP
- 8:45AM **General Poster Session**
