

H3815 Council on Early Childhood Program

Early Childhood Systems to Address Social Determinants of Health and Promote Family Well-Being

Sunday, October 4

4:00PM – 6:00PM CDT

Lifelong health outcomes are rooted in social, economic, and relational experiences of early childhood. Pediatricians can promote child and family health and well-being through systematic identification of needs, coupled with referrals and linkages to services. This session will highlight systems-level strategies and partnerships to support family, especially during stressful times.
