

## H4407 Section on Radiology Program

Abusive Head Trauma: Catching Up With the News and the Science

Monday, October 5  
4:00PM – 5:00PM CDT

Abusive head trauma (AHT) is the leading cause of fatal head injury in young children. Recent fringe scientific and lay media publications have cast doubt on the diagnosis. This program will review the clinical and radiologic features of AHT and conditions proposed to be mimickers. Faculty also will summarize the evidence supporting the diagnosis.
